

HP colour solutions have empowered the finance and accounting staff of Beijing Shun Tian High Tech with vibrant, easy-to-recognise financial charts and reports.

Everyone in the sales and finance department of Beijing Shun Tian High Tech love HP Color LaserJet printers. And they love it not because of marketing brochures and business proposals printed, but how HP's colour printer produce vibrant reports and charts for ledger accounts and accounting documents.

The computerisation of accounting practices eliminated laborious chores associated with manual accounting. Backed with accounting software developed by Golden Abacus, the finance department relied on HP LaserJet 5100 Printer for their black-and-white printing needs. It was easy to use and never needed repairs.

However, in today's colour-saturated world, things have changed. Colour surrounds us everywhere. In the era of manual accounting, finance people heavily rely on colour-coded purchase orders and

invoices. The use of colour coding enables quick recognition of numerical digits (from single digits up to thousands) while lessening the strain on the eyes.

Since Beijing Shun Tian High Tech acquired an HP Color LaserJet printer, their printing needs have been streamlined. Untidy office clutter of excessive printers have been cleared, with hassle-free printer sharing. While some colour lines on financial spreadsheets may seem ordinary, it empowered finance and accounting personnel in the company.

The finance department of Beijing Shun Tian High Tech loves how their HP Color LaserJet printer helps them create vibrant reports and charts. With double-sided printing, they also bid farewell to manual page turning and welcome built-in duplex printing capabilities.
