

HP colour printers help railway track firm Central Railway 16th District 5th Group Company create economical, high resolution colour tender documents faster.

As a railway track engineering company, increasing productivity and market awareness are paramount. These essential tools are our ammunition to get ahead in this intensely competitive market.

In the past, we used inkjet printers, that proved to be inefficient and costly. Producing a tender document too use six days to product, and about RMB 800 (around US\$100) was spent on printing costs.

Ever since our company purchased an HP Color LaserJet printer, our staff no longer have to worry about printing tender proposals for project bidding. It takes us only three days to produce tender documents, costing us only RMB 300 (around US\$ 38)—a whopping 60% savings! Our colour tender documents are testament to the advantages of HP's Color LaserJets printing solutions.
