

The sharp, high resolution colour barcodes produced by HP Color LaserJet 2600n Printer ensured reliable barcode scanning for the devices and products at Fuji Tong Lian Electronics.

Fuji Tong Tian Electronics currently does not have a barcode tracking system, so they have to use various barcodes for their products from production to shipping. Barcodes were printed using their old colour inkjet printer. These low resolution printouts were not sharp enough to be properly scanned. Barcode printing inconsistencies, coupled with human errors, caused unnecessary losses to the company.

To overcome these issues, Fuji Tong Tian Electronics chose the HP Color LaserJet 2600n Printer. With the new printer, barcodes can be colour-coded for different machine types, preventing the production staff from scanning the wrong barcode. Faster printing speeds and sharp, high-resolution print quality ensured reliable bar code scanning—just what the company needs!

HP printing solutions has truly helped manufacturing companies like Fuji Tong Tian Electronics for their scanning processes.
